Professional Summary

DevOps Engineer with 3 years of experience in designing, automating, and managing cloud infrastructure, CI/CD pipelines, and containerized applications. Skilled in AWS, Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Linux administration, and Infrastructure as Code (IaC). Experienced in building scalable, secure, and highly available cloud environments while improving deployment automation and operational efficiency.

Professional Experience

Fourp Technology Solutions

Chennai, Tamil Nadu

July 2023 – Present

Software Engineer

- Designed, implemented, and maintained CI/CD pipelines using Jenkins and GitHub Actions to automate application build, testing, and deployment workflows.
- Provisioned and managed AWS infrastructure using Terraform, CloudFormation, and Ansible, automating the deployment of cloud resources while following Infrastructure as Code (IaC) best practices.
- Managed AWS services including EC2, VPC, IAM, S3, Route 53, ALB, ECS, EKS, and CloudWatch to support highly available and scalable production applications.
- Containerized applications using Docker and deployed workloads on Kubernetes and Amazon ECS, improving deployment consistency and application scalability.
- Configured Linux servers, automated operational tasks using Shell and Python scripts, and performed system administration, troubleshooting, and performance tuning.
- Collaborated with cross-functional teams including Development, QA, Infrastructure, and Release Management to streamline CI/CD pipelines and production deployments.
- Implemented Git branching strategies and managed source code repositories using Git and GitHub to support collaborative software development.
- Monitored infrastructure and application health using Amazon CloudWatch, investigated deployment issues, analyzed logs, and performed root cause analysis to improve system reliability.
- Prepared and maintained deployment documentation, infrastructure standards, and operational runbooks to support production environments.

Projects

Cloud-Native Microservices

- Technologies:** AWS (ECS Fargate, API Gateway, Cognito, S3, CloudFront, RDS PostgreSQL, DynamoDB, SNS, SQS), Terraform, Docker.
- Designed and deployed a cloud-native microservices platform on AWS using a secure and scalable architecture.
- Hosted the frontend on Amazon S3 with CloudFront CDN and implemented user authentication using Amazon Cognito.
- Containerized backend services and deployed them on Amazon ECS Fargate with API Gateway for secure REST API communication.
- Integrated Amazon RDS PostgreSQL and DynamoDB for relational and NoSQL data storage while using SNS and SQS for asynchronous messaging.
- Provisioned AWS infrastructure using Terraform following Infrastructure as Code (IaC) best practices.

Three-Tier Web Application Deployment

- Technologies:** AWS EC2, Terraform, Docker, Jenkins, Git, GitHub, PostgreSQL, Linux.
- Designed and deployed a three-tier web application consisting of frontend, backend, and database layers on AWS EC2 instances.
- Automated infrastructure provisioning using Terraform and configured networking components including VPC, subnets, route tables, security groups, and Internet Gateway.
- Built CI/CD pipelines using Jenkins to automate application build, testing, and deployment from GitHub repositories.
- Containerized application components using Docker and managed deployments on Linux-based servers.
- Configured secure networking, IAM permissions, and application connectivity to ensure reliable application availability.

Infrastructure Automation using Terraform

- **Technologies:** Terraform, AWS, GitHub, Linux.
- Developed reusable Infrastructure as Code (IaC) templates to provision AWS resources using Terraform.
- Automated the creation of EC2 instances, VPCs, subnets, Internet Gateways, route tables, security groups, Elastic IPs, and related networking components.
- Implemented Terraform variables, outputs, state management, and modular configurations to improve code reusability and maintainability.
- Maintained version-controlled Terraform configurations in GitHub with documentation, architecture diagrams, and implementation examples.
- Continuously enhanced the project by adding new Terraform concepts and AWS services while following Infrastructure as Code best practices.

Technical Skills

Cloud Platform: AWS (EC2, VPC, IAM, S3, Route 53, ECS, EKS, ALB, CloudWatch, CloudFront, RDS)

Infrastructure as Code: Terraform, AWS CloudFormation

Containerization — Orchestration: Docker, Kubernetes, Amazon ECS

CI/CD DevOps Tools: Jenkins, GitHub Actions, Maven, SonarQube, Nexus Repository Manager

Configuration Management: Ansible

Monitoring Logging: Amazon CloudWatch, CloudWatch Logs

Version Control: Git

Operating Systems: Linux, Windows

Programming / Scripting: Shell, Python

Application Server: Apache Tomcat

Certifications

- * AWS Certified Cloud Practitioner (CLF-C02)

Education

ABN PRR College Of Science

Bachelor of Science in Computer Science — CGPA: 7.5/10

September 2020 - Oct 2023

Kovvur, India

Languages Known : English, Telugu
